

Looking for Global Grant Financial Partner

Proposal for Global Grant Partner

Greetings from Rotary Club, Khamgaon.

Rotary club in Khamgaon was Chartered in the year 1959. Since that time, it is giving its need-based services to the society and executed various thrust area projects as declared by R.I. from time to time.

Rotary Club Khamgaon wants to apply for a global grant project.

We have done the survey and done the need assessment for this project called "GIVING NEW LIFE BY HEARING AIDS & EQUIPMENTS" to deaf and dumb school, run by one of the old & renowned charitable trust 'Shri Ram education society' Khamgaon in Maharashtra, India.

One of the main impacts of hearing loss is on the individual's ability to communicate with others. Spoken language development is often delayed in children with unaddressed hearing loss, which has an adverse effect on the academic performance of children. Access to suitable accommodations is important for optimal learning experiences but are not always available. Exclusion from communication can have a significant impact on everyday life causing feelings of loneliness and isolation and frustration.

By providing the hearing aids the children who are deaf by birth would be able to understand and develop their speech by which they will be able to gain their learning qualities. This will improve their lifestyle and will be able to get a job to earn their livelihood. Thus, they will be able to paddle their own canoe.

Secondly providing the equipment like Acoustic emission test machine and Brain evoke response audiometry machine, can provide the early detection and intervention are crucial to minimize the impact of hearing loss on child development and educational achievements. These equipment's provide screening as well as diagnostic test at very early stage, which is an effective tool for early identification and management of hearing loss. People with

hearing loss can benefit from the use of hearing devices such as hearing aids, cochlear implants and other assistive devices which in turn is helpful right from their childhood age.

Thus the project gives new life to the deaf children for their upliftment and the overall development.

This project will be covered in literacy, which is our one of the thrust areas.

The approximate cost of this project shall be around 40,000 dollars. The beneficiaries will be all 175 students learning in Deaf & dumb school and also all new-born babies, by which their parents will come to know about the early detection of hearing loss of their babies.

We request you give us financial support, between of 9,000 to 10,000 dollars as a foreign partner, so that such a well justified service to mankind project, can be executed.

Hoping for your positive reply.

If you need any further information about this project, please contact me anytime.

Thanks

Always yours in ROTARY
