### Discussion Points:

- The President called the meeting to order.
- The National Anthem was sung, led by Rtn. Mala Chakraborty..
- IPP Rtn. Tapas Bhattacharya narrated the details of the sewing machine project held at Shishu Shiksha Kendra Baruipur in association with UTTORA (NGO).
- Rtn. Deepak Mitra informed that he had a discussion with Mr. Kuntal Mazumdar the secretary of GANA UNNAYAN PARISHAD regarding the distribution of mosquito nets to which he said that it can be done either on 27.12.2025 or 28.12.2025.
- Rtn. Deepak Mitra informed that there was a possibility of organising a sports event with the children of that area on 26/1/2026.
- An awareness camp on Thalassemia can also be arranged in the locality in association with Gana Unnayan Parishad(NGO).
- The President desired to organise a Christmas Party for the inmates of Natun Ghar where cakes savouries and groceries will be provided.
- Rtn. Mala Chakraborty held a lengthy discussion on the annual fair MONER TAANEY. She requested the members to put in all their effort for the success of this event.
- Next date of the meeting has been fixed on 19<sup>th</sup> Dec'25

## From Editor's Desk

**Ever wonder, why do Snowflakes always have Six Sides but never look the same?**

**It all starts with water molecules** – Snowflakes form when water vapor in the air freezes into ice. The way water molecule bond as they freeze naturally leads to six-sided share. It's not random; it's chemistry. Each water molecule connects with others at precise angles, and the most stable way for them to lock together is in a hexagon.

**Symmetry doesn't mean identical** – even though all six arms of a snowflakes grow out from the same center and follow the same physics, they don't always grow at exactly the same rate. That's where the verity comes in. A tiny temperature shift or puff of wind can throw off the growth on one side and create subtle differences.

Also, as a snowflake falls through the sky, it travels through different layers of the atmosphere. Temperature, humidity and air pressure are constantly changing, and each shift leave its mark on how the flake grows.

**Snowflakes are perfect examples of chaos and order working together** – Snowflakes are the perfect balance between structure and unpredictability. The six-sided design is nature's order – the rulebook that never changes. But within that rulebook, there's endless room for randomness based on conditions the flaks can't control

**!!!Wish you all a very happy holidays and new year ahead!!!**
