*Today's programme
Talk on Tuberculosis-The
Global Change*

EDITORIAL

TB is an infectious disease. The infection starts from the lungs and gradually spreads over to all other parts. The main symptom is coughing. It's a curable disease but only an early diagnosis can cure the disease. Poverty, poor sanitation & healthcare causes TB. A proper guidance will prevent it. Government & private organisation collaborated to strengthen the TB control programs. They are reaching out to people for easy access on early diagnosis and getting proper treatment. They are also organising and promoting awareness programs of the disease.

This year's theme is "Yes! We Can End TB: Commit, Invest, Deliver." Commit- to eliminate TB, invest in research and vaccination, deliver healthcare services, awareness, and prevention.
