

# Mumbai Students Lead the Way to Environmental Solutions

The virtual room buzzed with anticipation as young innovators from Mumbai prepared to present their visions for a greener planet. Screens lit up with models, charts, and prototypes—evidence of months of dedication from students representing schools across the city. This wasn't just another competition; it was a movement, one that empowered youth to tackle environmental challenges head-on.

Guided by the visionary leadership of ESRAG SA Chair Ajay Gupta and supported by Rotary Club of Bombay Chembur West, the event organised by Rtn. Asha Janardhanan provided an extraordinary platform for students to shine. From inventive waste management solutions to practical renewable energy projects, their ideas reflected creativity and a profound commitment to sustainability.

Two eminent judges, Dr. Jeni Padua and Rtn Neeraj Bhatnagar, lent their expertise to the proceedings. Their thoughtful critiques and encouragement elevated the participants' confidence, creating a dynamic learning environment.

The highlight of the day was the interactive online session, where students presented their projects and engaged with environmental leaders. This exchange of ideas turned the competition into a celebration of collaboration and innovation.

In the end, 10 schools were honored for their outstanding efforts. Yet, the true victory lay in the inspiration sparked, setting a precedent for future environmental breakthroughs.
