PROPOSED ROTARY HARSHAD PATEL MULTISPECIALITY HOSPITAL, ALIPORE PROJECT

Rotary Club of Chikhli River Front was established on 7th of June 2018, with an aim to serve the community of Chikhli Taluka and surrounding areas, as per their needs. Since then, we as a Rotarian started working for the welfare of the local population.

RC Chikhli River Front has gone strength-to-strenght and have been successful in its many projects it has undertaken such notable ones includes Some of Our Service Projects and Achievements which has worked well in a big way:

- 01 Provision of Free medicines were provided to those flood-affected people of Kerala.
- 02 Numerous Blood Donation Camps at various places.
- 03 Medical Aid provided free of cost those need who can ill-afford to pay for such services of their need to the poor and needy persons.
- 04 Aksharyaan Service-Journey to the Last Destination was introduced for the first time in Chikhli Taluka for which credit and sincere thanks to Harshadbhai and Indiraben Patel and family in association with Alipore Social Welfare Trust(ASWT).
- 05 Ambulance services for shifting of patients free of charge from one hospital to another within 30 Kms radius in association with Alipore Hospital.
- 06 Cancer Detection-on-Wheels services provided free of charge n Rotary Global Grant Scheme and sincere thanks again to Harshadbhai and Indiraben Patel and family.
- 07 Chikhli Covid Care Centre, a 50-bedded Covid-19 isolation centre immediately setup through a critical period of two months with covid related patients of 805 were treated Free of Cost (including Laboratory Tests, Medicine, CT Scans, Food etc) with total 100% success.
- 08 Provison of nutritional food was provided to those Malnourished Expectant Mothers and Children identified by Department of Women and Child Welfare Team to eradicate the Malnourishment in the Chikhli Taluka.

To name a few of the good work towards health were carried out by Rotary Club Chikhli River Front Team. All of the above works were possible as we had undertaken these projects in association with Alipore Social Welfare Trust (ASWT) -Alipore Hospital. Since past 23 years at Alipore Hospital, patients are treated at free or subsidized rates and all treatment are done under one roof except the treatment of Heart.

Thanks to the Management of ASWT, they have offered to give the land area for Cardiac and Multispeciality Treatment without any rent or payment to serve the community with care and provide as much relief as possible to the patients. Rotary Club of Chikhli River Front Foundation will undertake the building of a state-of-art Cardiac and Multispeciality Hospital which will have all the modern machineries and equipment in the proposed hospital facility where 'patients' treatment will be given priority rather than their treatment cost.

THE NEED FOR A CARDIAC HOSPITAL IN CHIKHLI TALUKA.

During our work for healthcare, we found that most of the critical cases like heart attacks in Chikhli, Khergam and Gandevi Taluka, the patient is referred to either Surat or Navsari. The shifting of patients take time and in heart attack cases the first hour at the time of cardiac arrest is very crucial. Hence to prevent further damage, a Cardiac Hospital is needed in the area.

Heart is the most important organ in body. Heart is the organ that shoulders the responsibility of circulating oxygen throughout our body, keeping all your organs alive. A healthy heart is always a sign of a healthy life. India has struggled with heart-related diseases for a long time. Owing to people's unhealthy lifestyles and lack of awareness, more and more people are falling prey to heart diseases every year. Issues like silent heart attacks, cardiomyopathy, cardiac arrest, etc., are becoming more prominent, making even younger patients lose their lives.

SUCH CASES PROMPT US TO BE MORE CAUTIOUS THAN EVER WHEN IT COMES TO OUR CARDIAC HEALTH.

Gone are the days when heart attacks were limited to older patients who exhibited overt symptoms. With the younger Indian population suffering from heart-related issues like heart attacks, it is high time we start taking cardiac care seriously.

When the blood vessels carrying blood to your heart are blocked, and the heart is deprived of its blood supply, it results in heart attacks. While most heart attack cases have clear symptoms like pressing/squeezing pain in the chest, breathing difficulties, nausea, a sense of impending doom, etc., patients may also experience these attacks without any symptoms, especially in their sleep. Effective cardiac care ensures seamless blood flow to your heart, keeping you safe from heart attacks. However, if one does encounter any of the symptoms mentioned above, make sure you visit the nearest cardiac care center immediately.

Without adequate blood flow, your brain cannot function properly, making it susceptible to serious issues like dementia. This also makes it difficult for patients to make sound decisions and interferes with reasoning.

Looking at the state of cardiac health in the country, it is important to take matters related to our cardiovascular health seriously. At our proposed cardiac hospital shall ensure that patients not only go home healthy and happy but also spread the word about the importance of healthy hearts. By installing state-of-the-art equipment at all its center, we shall steer away from making any compromises when it comes to the services offered to the patients.

The team of trained and experienced cardiologists at our Cardiac Care shall provide personalized care and attention to every patient, helping them tackle multiple heart-related issues and ensuring sound cardiac health. We aim to make the country's heart healthier by making more and more people aware of the importance of regular check-ups and a healthy lifestyle.

APPEAL

In the coming pages, we are presenting a project report for the Proposed Cardiac and Multispeciality Hospital. This project needs your help and support so that we can accomplish this project and to provide immediate medical care to all the patients in emergencies and under medical treatment.
